

wxConv is a very simple tool to convert **1 xml file** to **1 html file** via xslt.

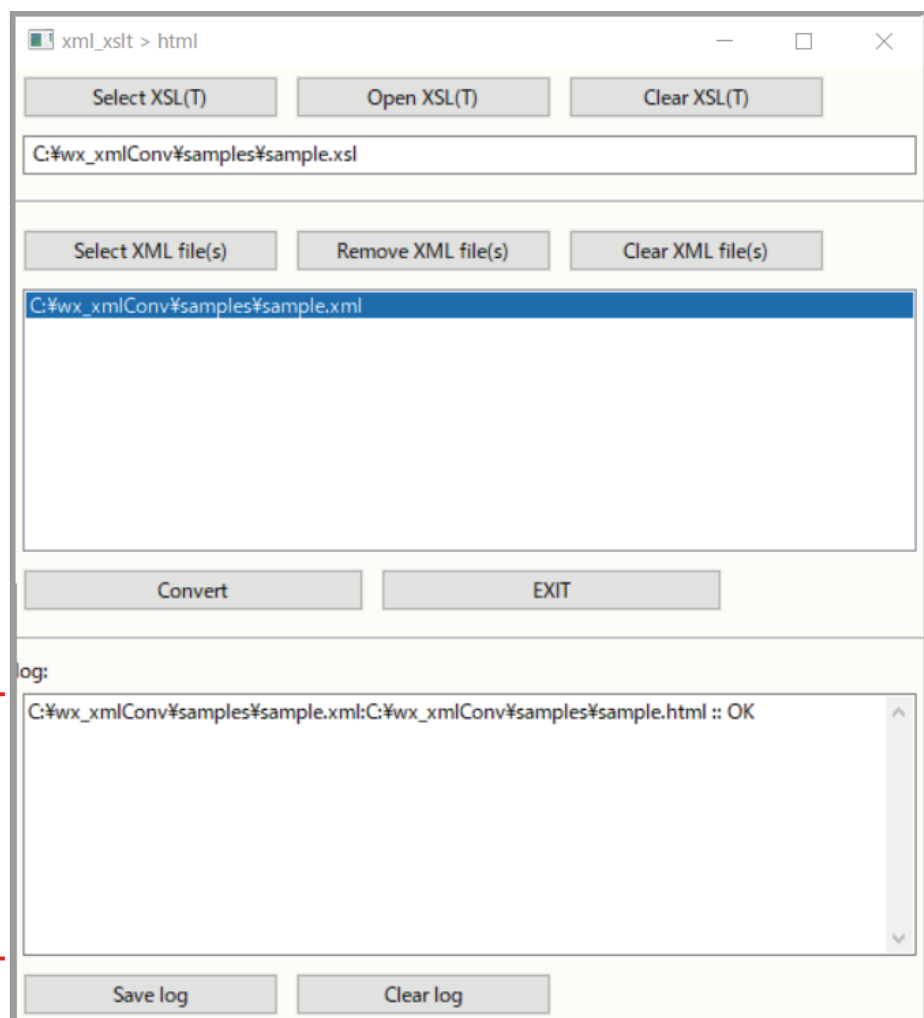

\*The min version can choose only 1 xml at 1 time and doesn't have editor.

When successfully converted, newly made html files' url and ":: OK " messages appear.

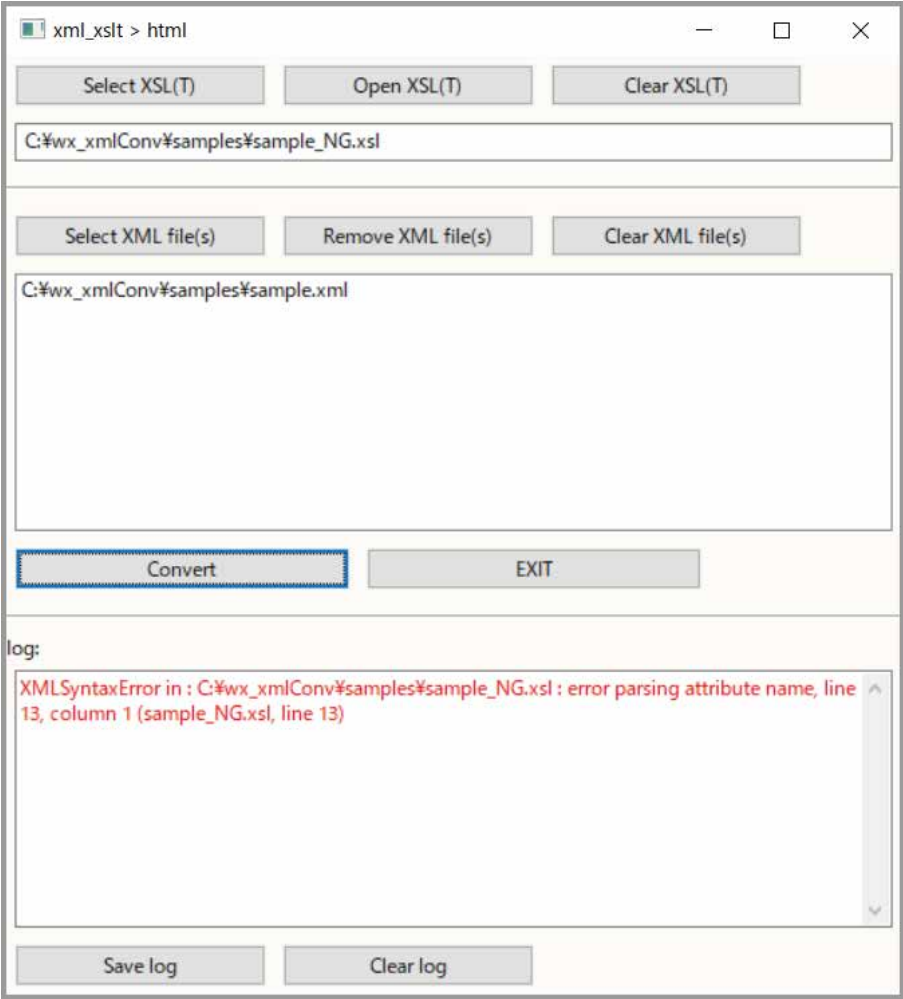

\*html file is created in the same folder with xml files.

html files' url + ":: OK "

In case of error, for example xslt or xml have some error etc, messages apper in log text area

error messages here

Click Open button or doubleclick url fields to open editor and correct, save, try convert again.
